The FAA Airspace Zones include the Approach, Transitional, Horizontal, and Conical Zones, as they are defined in SJCC Chapter 18.20. All development within these zones must comply with FAA regulations in 14 C.F.R., Part 77 and with regulations in SJCC 18.30.180(B) and 18.40.030 and .031 relating to the heights of structures and objects proximate to airports, the protection of airspaces, and filing of notice. The districts on these maps are approximations of the airspace zones and their virtual surfaces.
